Sommaire

1 Contents of the packages

1 package for the steering support
1 package for the steering wheel with the following elements:
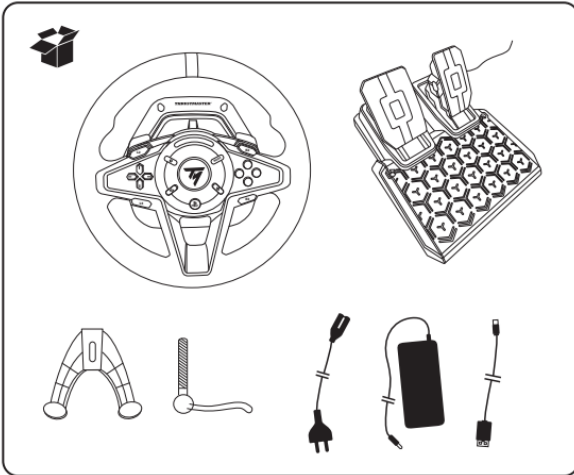

Wheel + Pedals

Fixing kit

Power supply, power cord and computer cord

❑ Open the support box.

❑ Take out tools from **B Pocket**.In the **A pocket** you will find the kit for pedals bracket.

2 Preparation

❑ Unscrew a little the plate with tools (flat key and Allen key).
❑ Adjust the steering wheel support perpendicular to the mast, then tighten it firmly; the screw will be inaccessible once the steering wheel is mounted.

3 Steering wheel connections

❑ Connect the different cables following this diagram before fixing the steering wheel on the plate.
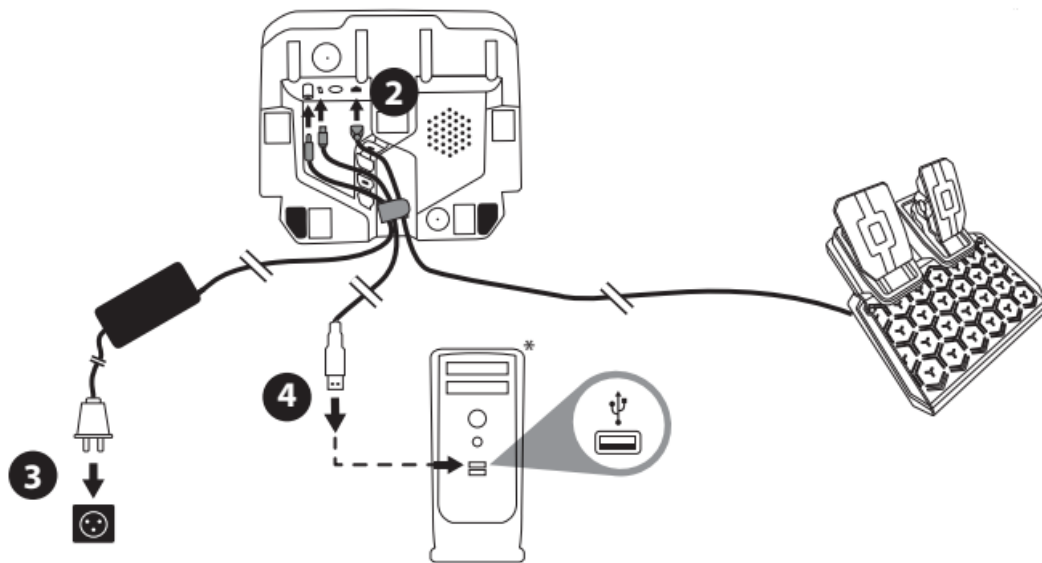

From Left to Right
- 1- Power socket
- 2- USB-C computer connection
- 3- Optional socket
- 4- RJ11 pedals

Use the guides and the strap to position the cables without risk of pinching/damage during installation on the support.

4 Attachment

1.1 Steering wheel deck

❏ Place **screw B** inside thread **C** under the steering wheel.
❏ Adjust the steering wheel on the mast with **part A**.

2.1 Pedals

❏ Place the rubbers on the red bar as shown in the image below.
❏ Position the pedal attachment on the steering wheel support.
❏ Tighten the screws halfway to allow movement of the pedal attachment.

❏ Unpack the pedals and position it as shown in the image below.
❏ Hold the pedals by screwing the fixing bar around them with the Allen wrench.
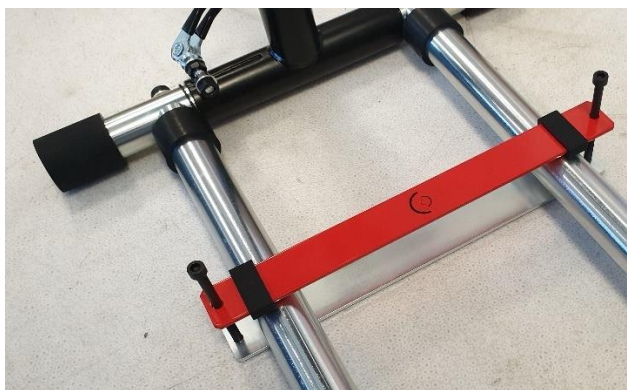

5 Computer instructions

❏ Install the Thrustmaster's driver for T128 (it is the same for both T150/T128 and TMX steering wheel)
❏ Open the Start Menu (Windows key on the keyboard) and enter "usb"
in the search bar.
❏ Select "Configure USB game controllers".
❏ Click on "Thrustmaster T128 Racing Wheel" and "Properties".
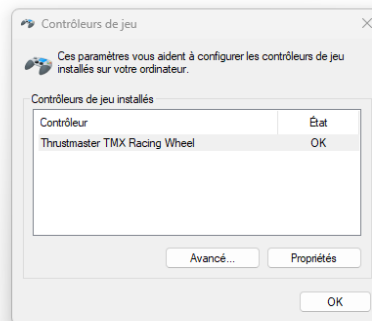

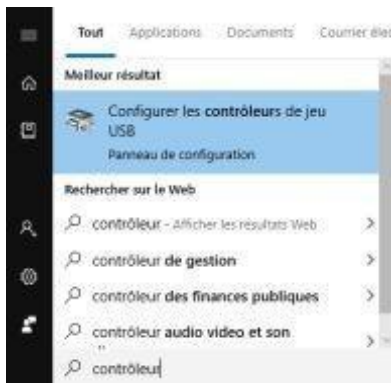

❏ In the "Test Input" tab, select the "Combined" option. ".
❏ In the "Gain stettings" tab, set the "overall Strength of all forces" option to 100%.
❏ In the "Auto center settings" tab, select the "by the wheel" option and set the value to 70%
